DETAILED ACTION

- 1 This action is responsive to the response filed on April 21, 2003.
- The rejection of claims 2-8 and 32-77 under 35 U.S.C. 103(a) as being unpatentable over Rondeau et al. (US 6,001,135) in view of Casperson et al. (US 5,376,146) and further, in view of Aaslyng et al (WO 97/19998), is maintained for the reasons set forth in the previous office action in paper No. 14, dated 10/23/2002.

Response to Applicant's Arguments

3 Applicant's arguments filed 4/21/2003 have been fully considered but they are not persuasive.

With respect to the rejection based upon Rondeau (US' 135), Casperson (US' 146) and Aaslyng (WO' 998), Applicant argues that there is no motivation or reasonable expectation of success to combine the references.

The examiner respectfully disagrees with the above arguments because Rondeau (US' 135) as a primary reference teaches a hair dyeing composition comprising the cationic dyes as claimed (see col. 2, lines 25-65, col. 3 and 4, lines 1-65). Rondeau also clearly teaches that quaternary ammonium compounds are used in the hair dyeing composition (see col. 24, Example 2). The primary reference of Rondeau also teaches that the hair dyeing composition comprises an oxidizing agent selected from oxidizing agents that used conventionally in oxidation dyeing composition (see col. 21, lines 14-19). Casperson (US' 146) in analogous art teaches a hair dyeing composition comprising quaternary ammonium salts which represented by a formula similar to the claimed formula as described in the previous office action. The secondary reference of Casperson clearly teaches that the quaternary ammonium salts are used in the hair

7 7

dyeing compositions as conditioners for improve the lubricity of the hair such as making the hair easy to detangle while wet and feel smooth and be readily managed when dry (see col. 8, lines 61-68 and col. 9, lines 1-4). Aaslyng (WO' 998) in other analogous art of hair dyeing composition teaches a composition comprising laccase enzyme as an oxidizing agent as claimed in claim 58 (see page 3, lines 28-29). Aaslyng clearly teaches that the use of hydrogen peroxide as an oxidizing agent in the dye compositions have some disadvantages such as damages the hair (see page 2, lines 20-21). Therefore, it would have been obvious to the skilled person in the art to be motivated to modify the primary reference of Rondeau by incorporating the quaternary ammonium salts of Casperson and laccase enzyme of Aasylng to make such a composition with the reasonable expectation of success for improving the conditions of the hair as taught by Casperson and to reduce the damage on the hair as taught by Aasylng. Therefore, the prima facie case of obviousness has been established.

4 THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
